JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

XLIV. *An Account of the said Comet; by  
Mr. Mark Day.*

S I R,      Lowick, near Thrapston, Northamptonshire.

Read Jan. 17, 1760. **I** Had the pleasure last night, about five o'clock, to observe a comet in the southern hemisphere, near the northmost extremity of the river Eridanus, tending its course towards Pegasus, and, near as I can guess, it will cross the ecliptic about  $20^{\circ}$  in Aries. It moves one degree in less than one hour and half; but seems too hasty to give the astronomers leave to make many observations upon it, unless the weather prove favourable. If there has been any accurate observation thereupon, I would gladly know; but if it has not been taken notice of, then I hope the above will be acceptable from,

S I R,

Your very humble servant,

Jan. 10, 1760.

Mark Day.

It passed the meridian about 9.
